

# Manufacturing & Industry

## Industrial site (middle size)

### Chain-link fencing

Effective way to create a low security zone within the site perimeter to prevent unauthorised persons entering. Easily installed and available in various configurations.

### Turnstile

Safe and secure regulated pedestrian entry for individual passage of factory personnel.

### Noise barrier

An extremely effective sound wall with very high noise insulation and absorption properties. Ideal for protecting residential, municipal, and commercial areas from a noisy industrial site.

### Electric fence

A physical shock deterrent and detection system to stop potential intruders and dissuade them from attempting to breach the site perimeter.

### Bar fencing

Strong and secure bar fencing to clearly define a site boundary. Because its smooth surface is less vulnerable to moisture and dirt, the fence requires minimal maintenance. Attractive design is ideal for high-visibility industrial locations.

### Swing gate

This double leaf swing gate is the ideal solution for low security entrance control. Its solid and clever suspension, with adjustable hinges, enables the gate leaf to be opened 180° allowing maximum entry width for site vehicles.

### Sliding gate

This safe and extremely robust sliding gate can be configured for all customer needs. Automated or manual operation, heavy or low use, and large choice of widths make this the ideal gate for most industrial site.
